

INFOSHIELD® — November 2007

Laser vision correction is becoming increasingly popular to correct common vision problems, such as myopia (near-sightedness), hyperopia (far-sightedness) and astigmatism (distorted vision when looking at objects in the distance).

Important things to consider

If you are considering laser vision correction, it is important that you find out if you are a suitable candidate. Discuss your options with your eye doctor. If you and your doctor decide that laser vision correction is a good choice for you, ask for an initial consultation with a laser vision correction surgeon.

Green Shield Canada extends its provider network

Green Shield Canada provides a national preferred provider network which now includes LASIK MD, one of Canada's leading providers of laser vision correction. LASIK MD doctors are among the most renowned and experienced in the world, having performed over 350,000 procedures. All Green Shield Canada plan members (and dependents over age 18) are eligible to receive a 10% discount off the cost of laser vision correction for both eyes at any LASIK MD location across Canada (up to a maximum of \$150)*.

How to receive this discount

1. Present your Green Shield Canada ID Card during your initial consultation with LASIK MD.
2. On the day of your procedure, LASIK MD will apply the discount to the cost of the procedure. You will need to pay the outstanding amount.
 - a. If your benefit plan covers laser vision correction, submit your claim (including a claim form and an original receipt) to Green Shield Canada for reimbursement.
 - b. If your benefit plan does not cover laser vision correction, you pay LASIK MD the outstanding balance after the discount has been applied.
